1. Introduction & Overview

MpxHR Enterprise is a complete, offline-first Desktop HR Management System built for small and mid-sized organizations. It runs entirely on a local computer — no internet connection is required for day-to-day use — and stores all company, employee, attendance, and payroll data securely on the local machine.

What MpxHR Manages

Area	What it covers
Employee Records	Full personal, statutory, bank, and salary-structure profiles
Attendance	Daily check-in/out, monthly grid, shifts, leave, holidays
Payroll	Automatic salary computation, PF/ESI/PT/TDS/VPF/Loan deductions, payslips
Compliance	Form 16 certificates, statutory challans, PF/ESI/TDS reports
Recruitment	Job postings, candidate pipeline, onboarding checklists
Assets & Helpdesk	Company asset tracking and internal support tickets
Reporting	Ready-made reports plus a custom report builder

Multi-Company Support: MpxHR can manage multiple companies and branches from a single installation. You choose the active company each time you launch the application.

2. Getting Started

2.1 Launching the Application

Double-click the MpxHR desktop icon (or Start Menu shortcut). The application opens directly — no browser or internet required.

2.2 Logging In

- 1 Enter your **User Name** and **Password** on the login screen.
- 2 Click **Sign In**.

Default Administrator Login: Username admin, Password admin123. Change this password immediately after your first login (see Section 14.7, Security & Users).

2.3 Selecting a Company

After logging in you will see the **Company Selection** screen. This shows a quick overview (Total Employees, Departments, Present Today, Registered Companies), a **Quick Reports** shortcut list, and the company grid.

- 1 If you manage more than one company, click a row to select it, or use **Add** to register a new company.
- 2 Click **Continue** to enter the application for the selected company.

2.4 The Main Interface

Area	Purpose
Context Bar (top)	Switch active Company , Financial Year , and Month — most screens filter by these
Ribbon Tabs	Dashboard, Masters, Attendance, Payroll, Reports, Documents
Ribbon Toolbar	Icons for each module inside the active tab
Content Area	The active screen — grids, forms, and reports

Keyboard shortcuts: Ctrl+S (Save), Ctrl+N (New), Del (Delete), Esc (Close dialog) work on most data-entry screens.

3. Dashboard & Analytics

3.1 Overview

The Dashboard is the default landing page and gives an at-a-glance view of the organization:

- **Recently Viewed Pages** — quick links back to screens you used in this session
- **Request Links** — shortcuts to pending TDS, loan, leave, attendance, and reimbursement requests
- **Bulk Changes Links** — jump straight into bulk-edit mode for Branch, Designation, Employee Details, Salary Definition, Shift, or Category
- **Utility Links** — Current Running Loans, an **EMI Calculator**, a Section **80C** quick-reference, and Allowance & Deduction shortcuts

3.2 Analytics

Click **Analytics** in the Dashboard ribbon for four live charts: Employment Status, Attendance Overview (current month), Salary Distribution by Department, and Hiring Growth (last 6 months). Click **Refresh Data** to reload the latest figures at any time.

4. Masters — Employees, Departments, Designations, Branches

4.1 Employees

The Employees screen ([Masters](#) → [Employees](#)) is the central record for every staff member.

Adding an Employee

- 1 Click **New** on the toolbar.
- 2 Fill in personal details (name, DOB, gender, contact, address), employment details (department, designation, date of joining, status), salary structure (basic, DA, HRA, allowances), and statutory numbers (PAN, Aadhaar, PF/ESI/UAN).
- 3 Optionally upload identity/qualification documents from the Documents tab of the form.
- 4 Click **Save**.

Editing, Selecting & Deleting

- Tick the checkbox next to one or more employees, or click the header checkbox to **select all**.
- **Edit** works on exactly one selected employee.
- **Delete** works on one or many selected employees at once and automatically removes their attendance, payroll, leave, and document history.

Other Tools

- **Simultaneous Edit** — inline bulk-edit mode for quick corrections across many rows at once.
- **Import / Export** — bring employees in from Excel or export the full list out.
- Search and Department/Branch filters narrow the grid instantly.

4.2 Departments

[Masters](#) → [Departments](#) — a simple list of organizational departments (e.g. Engineering, HR, Finance) used throughout the rest of the system for grouping and reporting.

4.3 Designations

[Masters](#) → [Designations](#) — job titles with a default base salary. Each designation also carries:

- **LWF Category** — Employee / Supervisor / Manager, used for Labour Welfare Fund classification
- **Probation Period (days)** — default probation length for employees in this role
- **Deduct PT** — whether Professional Tax applies to this designation

4.4 Branches

[Masters](#) → [Branches](#) — physical office locations linked to a company. Employees and attendance can be filtered by branch.

5. Masters — Salary Heads, Categories, Loans, Deductions

5.1 Salary Heads

[Masters → Salary Heads](#) — defines every earning and deduction component (Basic, HRA, Conveyance, etc.) used to build employee pay packages. Each head can be flagged:

- Earning or Deduction
- Considered for PF / ESI / Bonus / Overtime calculations
- Its Form 16 category (e.g. "Salary u/s 17(1)")

5.2 Employee Categories

[Masters → Categories](#) — free-form groupings (e.g. Staff, Worker, Management) for classification and bulk reporting.

5.3 Loan Setup

[Masters → Loan Setup](#) — record an employee loan or advance once, and MpxHR takes care of the rest.

- 1 Click **New**, choose the employee, loan type, principal amount, monthly EMI, and start date.
- 2 Save. The loan appears as **Active** with a running balance.

Every time payroll is generated, the active EMI is automatically deducted from that employee's salary and the loan balance is reduced. When the balance reaches zero the loan is marked **Closed** automatically. Use **Mark Closed** to close a loan manually at any time.

5.4 User Defined Deductions

[Masters → User Deductions](#) — create custom, company-wide deduction types beyond the standard PF/ESI/PT/TDS (e.g. uniform fee, canteen charges). Each is either a **Fixed amount** or a **Percentage of Gross Salary**, and is automatically applied to every payroll run while marked Active.

6. Company & Branch Setup

Masters → Companies holds the full legal and statutory identity of each company you manage, across five tabs:

Tab	Contents
General	Name, code, establishment date, business type, address, logo
Statutory	PAN, TAN, GSTIN, CIN, Professional Tax Registration, LWF Registration, Tax Circle/CIT
PF / ESI	PF code, establishment ID, signatory; ESI code, local office, signatory
Bank	Company bank account details used on payslips and bank advice reports
Management	Two Director / Authorised Signatory records (name, designation, father's name)

Use **Simultaneous Edit** to correct several companies at once, or select one/many rows and use **Delete** to remove them.

7. Attendance & Shifts

7.1 Daily Attendance

[Attendance → Daily Attn.](#) — check employees in and out for the current day, or correct a specific day's punch times and status.

7.2 Monthly Attendance

[Attendance → Monthly Attn.](#) (also the default screen when opening the Attendance tab) shows every employee against every day of the selected month as a colour-coded grid:

Code	Meaning
P	Present
A	Absent
L	Leave
WO	Weekly Off
HD	Half Day
PL	Paid Leave
HL	Holiday

Click any cell to change that day's status for that employee. The **PL** and **RH** counters in the header show the company-wide remaining Paid Leave and Restricted Holiday balances at a glance.

Bulk Tools

- **Mark Multiple** — apply one status to several employees across a date range in a single action.
- **XLS / Tpl / Imp** — export the grid, download a fill-in template, or import attendance from Excel.
- **Credit Leaves** (coins icon) — automatically credits monthly PL/CL to employees who meet the tenure and minimum-attendance rules configured in Settings.
- **Auto-Fill** (magic wand icon) — fills remaining blank days as Present, useful before month-end payroll.

7.3 Shifts

[Attendance → Shifts](#) — define shift timings (start/end, grace period) and assign employees to shifts via the roster.

8. Leave Management

Attendance → Leave App.

8.1 Applying for / Recording Leave

Select the employee (administrators only — employees see only their own record), leave type, date range, and reason, then submit. An administrator can then **Approve** or **Reject** the request.

8.2 Leave Types & Holidays

- **Leave Types** — define each leave category (Casual, Sick, Paid Leave, etc.) with a maximum annual allowance and a display colour.
- **Holiday Calendar** — add company holidays as **Public**, **National**, or **Restricted (RH)**. Restricted Holidays feed the RH balance shown on the Attendance screen.

8.3 Leave Balances

Each employee's running balance per leave type is tracked automatically and visible from their profile / the Leave screen.

9. Payroll Processing

9.1 Payroll Months

Each Financial Year/Month combination has an Open/Closed status. Close a month once its payroll is finalised to prevent accidental changes.

9.2 Generating Payroll — Net Pay

[Payroll](#) → [Net Pay](#) shows every active employee's salary sheet for the selected period, grouped into Employee Details, Income, and Deductions.

- 1 Confirm the correct Company / Financial Year / Month in the context bar.
- 2 Click the refresh icon to (re)calculate figures from attendance and salary master data.
- 3 Review/adjust individual cells if required.
- 4 Click **Save** to commit the payroll for the period.

What Gets Deducted Automatically

Deduction	Source
PF (Provident Fund)	Employee's PF rate against Basic+DA, capped at the configured wage limit
VPF (Voluntary PF)	Employee's elected voluntary PF percentage
ESI	Applied automatically when gross salary is within the ESI threshold
Professional Tax	Based on the employee's and their designation's PT settings
TDS	Computed from configurable income tax slabs
Loan EMI	Pulled automatically from any Active loan in Loan Setup
User Defined Deductions	Any active custom deduction from Master → User Deductions
LOP (Loss of Pay)	Pro-rated automatically from attendance shortfalls

Payroll Toolbar Actions

- **Cal TDS** — recalculates TDS for every row from current gross figures.
- **Transfer TDS** — marks TDS for the period as remitted/transferred to the government for record-keeping.
- **Challan** — generates a PDF summary of total PF, ESI, Professional Tax, and TDS for the period, ready for statutory deposit.
- **Clear Col** — bulk-clears a chosen column (e.g. TDS) across every row before recalculating manually.

Challan and Form 16 documents produced by MpxHR are computed from your payroll records for convenience — always verify figures before filing with statutory authorities.

10. Payslips

[Payroll](#) → [Payslips](#) lists every processed payslip for the selected period.

- Click any row to preview, then **Export PDF** or **Export Word** for a single employee.
- Select multiple employees and use the **Bulk Export Wizard** to download payslips for several employees/months in one go.

11. Reports & Form 16

Reports → All Reports opens the Reports Center.

11.1 Ready-Made Reports

Report	Description
Employee Master List	Active employees with personal & salary details
Monthly Attendance Log	Detailed daily attendance status
Salary Sheet	Monthly payroll statement with deductions
PF & ESI Statement	Provident Fund and ESI contribution report
Bank Advice	Net-pay list formatted for bank transfer
TDS & Tax Report	Tax deductions and projections
Yearly Salary Register	Annual salary summary per employee
Department Summary	Headcount and cost analysis by department

Every report can be filtered by month/year/employee where relevant, and exported to Excel/CSV via the toolbar.

11.2 Form 16

Generates a Form 16-style Annual Salary & TDS Certificate for one employee and financial year, drawn directly from saved payroll records.

- 1 Select **Form 16** from the Reports Center.
- 2 Choose the Employee and Financial Year.
- 3 Click **Generate Form 16 PDF** — the certificate downloads automatically.

This is a simplified, system-generated certificate for internal use — it is not a substitute for the statutory e-filed Form 16.

11.3 Custom Report Builder

Build your own report: pick a data source (Employees, Payroll History, Attendance Logs), tick the columns you need (use **Select All / Deselect All** for speed), and generate the result as a table you can export.

12. Documents & Letters

[Documents](#) → [Letters](#) generates official employee letters (offer letters, appointment letters, and other templates) by merging your letter templates with a selected employee's live data — name, designation, salary, address, bank details, and more are inserted automatically wherever a placeholder like `{{name}}` appears in the template.

13. Recruitment, Helpdesk, Performance & Assets

13.1 Recruitment

- **Jobs** — post and track open positions by department.
- **Candidates** — a drag-free kanban pipeline: Applied → Interview → Offer → Hired / Rejected.
- **Onboarding** — a checklist of setup tasks for each newly hired employee.

13.2 Helpdesk

Employees can raise internal support tickets (category, priority, subject, description); administrators track and resolve them from the same screen.

13.3 Performance

Employees submit a self-review (rating + comments) for a review period; managers then submit their own rating and feedback to finalise the review. Click the eye icon on any review to see both sides side-by-side.

13.4 Assets

Track company inventory (laptops, phones, equipment) — add assets, assign them to an employee, and return them to the pool when no longer in use.

14. Settings & Configuration

Masters → Settings

Tab	What you configure
General	Theme and date format preferences
Branding	Application name and logo shown throughout the app and on the login screen
Notifications	Birthday and work-anniversary desktop notifications
Salary Components	Company-wide salary head defaults
Payroll & Leave	Payroll month start day, LOP calculation basis, overtime rate multiplier, default probation days, Labour Welfare Fund contribution & frequency, leave accrual rules, PL/CL monthly credit, RH annual quota
Document Config	Letter reference number prefix and sequencing
Database Maintenance	Manual and automatic backups (see Section 15)
Security & Users	Change the administrator username/password; manage user accounts
Module Rights	Show or hide entire modules (Masters, Attendance, Payroll, Reports, Documents) for this installation

15. Backup, Restore & Data Security

15.1 Manual Backup

- **Database Only (.sqlite)** — a compact backup of all records, optionally protected with an encryption password.
- **Full Backup (.zip)** — the database plus every uploaded document/attachment.

15.2 Restore

Restoring replaces the current data with the selected backup file. The application will ask for the encryption password if the backup was password-protected.

Restoring a backup overwrites all current data. Take a fresh backup of the current state first if you are unsure.

15.3 Auto-Backup

Enable automatic backups on a schedule of your choice from the Database Maintenance tab; MpxHR performs the backup automatically when the application closes.

15.4 Built-in Data Protection

- All passwords are securely hashed — never stored or displayed in plain text.
- Destructive and administrative actions (deleting records, generating raw SQL queries, restoring backups, etc.) require an active administrator session.
- The application prevents two copies from running at once, protecting the database from write conflicts.
- All activity is written to a local diagnostic log to assist support in the rare event of an issue.

16. User Roles & Permissions

Role	Access
Administrator	Full access to every module, all employees' data, payroll processing, settings, backups, and user management
Employee	Self-service access — own attendance, leave application, payslips, helpdesk tickets, and performance self-review

Create additional login accounts for employees from [Settings → Security & Users](#) , linking each account to the corresponding employee record.

17. Troubleshooting & Support

Issue	What to try
Forgot admin password	Contact your system administrator or MpxHR support to reset it
Payroll figures look wrong	Confirm the correct Financial Year/Month is selected, attendance is fully marked for the period, and click the refresh/recalculate icon before saving
A module is missing from the ribbon	Check Settings → Module Rights — it may be turned off for this installation
Application won't open a second window	By design — only one copy of MpxHR can run at a time to protect your data

For further assistance, use the **Contact Support** link on the login screen, or reach out to your MpxHR implementation partner.
